## CONSUMER PRICE INDEX (CPI) (JAN-DEC 2012 = 100)

### OCTOBER 2021

Ministry of Planning and National Development

-  
Central Statistics Department (CSD)

## Methodological Note

The Consumer Price Index (CPI) and the accompanying report are prepared monthly by the Central Statistics Department (CSD) at the Ministry of Planning and National Development (MoPND). January to December 2012 is the price reference period, for which the CPI was set to 100.

The CPI is compiled from approximately 520 product prices collected in Hargeisa, mainly from the city's two biggest open-air markets. Those product prices are weighted according to the representative consumption basket, which is calculated based on consumption data from the Somaliland Household Survey (2013) and auxiliary data sources to overcome data gaps.

The CPI is produced following international standards for price statistics. For instance, the CPI follows the Classification of Individual Consumption by Purpose (COICOP), elementary aggregate indices are calculated using the geometric average method (Jevons index), and higher-level indices are computed as weighted arithmetic averages of their sub-indices (Laspeyres index).

Time series for the CPI and its main components, annual and monthly inflation, as well as detailed information on methodology are available on the CSD website: <https://somalilandcsd.org/>

### Consumer Price Index summary for October 2021

**In October 2021, the overall CPI decreased by -0.6% over the previous month, and increased 5.2% over the same month in the previous year.** Table 1 below summarizes the month-over-month and year-over-year changes in the overall CPI and for the main COICOP groups.

**Table 1. Monthly and annual change in overall CPI and main COICOP Divisions for October 2021**

#### Recent trends in the CPI and its main components

Code	Main Divisions/classes	Weights	Oct_20	Sep_21	Oct_21	Month Percent change	Annual Percent change
	<b>HEADLINE INDEX</b>	<b>100%</b>	<b>184.18</b>	<b>195.06</b>	<b>193.184</b>	<b>-0.6</b>	<b>5.2</b>
1	Food and non-alcoholic beverages	41.75%	<b>204.04</b>	<b>217.71</b>	<b>220.42</b>	<b>1.2</b>	<b>8.0</b>
1.1	FOOD	38.71	<b>202.49</b>	<b>218.72</b>	<b>221.48</b>	<b>1.3</b>	<b>8.6</b>
01.1.1	Bread and Cereals	10.48	<b>183.37</b>	<b>190.55</b>	<b>194.13</b>	<b>1.9</b>	<b>5.9</b>
01.1.2	Meat	6.05	<b>220.92</b>	<b>237.68</b>	<b>236.08</b>	<b>-0.7</b>	<b>6.9</b>

7	Transport	8.85%	<b>120.77</b>	<b>124.08</b>	<b>123.24</b>	<b>-0.3</b>	<b>2.4</b>
8	Communication	2.99%	<b>181.40</b>	<b>182.24</b>	<b>182.82</b>	<b>0.3</b>	<b>0.8</b>
9	Recreation and culture	2.25%	<b>160.61</b>	<b>166.00</b>	<b>166.24</b>	<b>0.1</b>	<b>3.5</b>
10	Education	3.69%	<b>147.35</b>	<b>160.55</b>	<b>147.02</b>	<b>-8.4</b>	<b>-0.2</b>
11	Restaurants and hotels	3.35%	<b>169.86</b>	<b>170.62</b>	<b>172.81</b>	<b>1.3</b>	<b>1.7</b>
12	Miscellaneous goods and services	4.62%	<b>186.47</b>	<b>190.06</b>	<b>188.84</b>	<b>-0.6</b>	<b>1.3</b>

Decomposing inflation into the three components presented in Figure 1 allows us to see the effects on prices of the movement by typically most volatile components of the CPI, food crops and energy fuel prices increased. It also allows us to calculate “Core Inflation” by subtracting these volatile components, which more accurately reflects the economy-wide change in prices that are influenced by aggregate demand and supply evolutions.

**Figure 1. Monthly headline inflation and its main components, trailing 6 months**

### Annual and monthly inflation rates over 12 months

**Over the past 6 months, monthly headline inflation has remained positive, peaking at 0.9% in May 2021. Headline inflation slightly decelerated in the following months, before almost stopping in Jun at 1.0% and slightly going up in July at 1.0%. Peaking at August 0.5% while September inflation at 0.5% and October 2021 inflation rate decreased at - 0.6%.**

The biggest monthly increments were measured for the “Food crop & related items” component, increased at 0.7% in May, 1.4% followed by Jun at 3.7% rate in July inflation at 1.8%, at August. However, the inflation decreased in September at 0.2%, in October inflation were increased at 1.6%.

On the other hand, the “Energy, Fuel and Utilities “component saw the highest monthly decreased followed by May at 2.9% and Jun at increased 2.9%, and same in July by 2.9%. Whereas August at 2.9%, followed by September constant at 2.9%, and inflation at October at -2.1%, this significant drop was driven by low worldwide fossil fuel prices following the global recession provoked by the COVID-19 pandemic.

The “Core Inflation” component, which reflects change in prices of goods in the consumption goods belonging to one of the other two components, was the least volatile of the three, oscillating between 0.7% increment in May, whereas, in Jun the inflation rate reached at 1.0%, in the July inflation rate reached at 0.7%, and August inflation decreased at 0.4%, and also September inflation increased 0.5%, in October inflation decreased at -0.8%, “Core Inflation” as the more volatile components varied less than in previous months.

**Table 2. Monthly percentage change in overall CPI and main components**

2020				2021									
Component	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct
Headline index	-0.9	0.3	-0.3	0.3	0.3	0.4	0.9	0.9	1.0	1.0	0.5	0.5	-0.6
Core	-1.6	0.3	-0.3	0.5	0.2	0.0	1.0	0.7	1.0	0.7	0.4	0.5	-0.8
Food crops & related items	1.8	0.1	0.0	-0.6	0.0	2.7	1.5	0.7	1.4	3.7	1.8	0.2	1.6

**Glossary**

**Index reference period (Jan-Dec 2012=100):** The period with which all other periods are compared (the period for which the value of the CPI is set at 100).

**Percentage change:** The change in an index or other statistical series from one period to another expressed as a percentage of its value in the first of the two periods.

**Annual inflation:** Percentage change between the current index number for a particular month and the index number for the same month of the previous year.

**Monthly inflation:** Percentage change between the current index number for a particular month and the index number for the previous month.

**COICOP:** The Classification of individual consumption by purpose, abbreviated as COICOP, is a classification developed by the United Nations Statistics Division to classify and analyse individual consumption expenditures incurred by households, non-profit institutions serving households and general government according to their purpose.

**How to interpret inflation and CPI statistics?**

Movements of the indices from one month to another usually are expressed as percentage changes rather than changes in index points. For instance, one index going from 50 in one month to 55 the next month represents a 10% increase in that index, which will be typically reported as a 10% rate of monthly inflation.

Table 4 below illustrates in more detail how to calculate monthly and annual inflation rates from index changes.

**Table 4. Example on how to interpret the relations between index changes and inflation**

Monthly Inflation		Annual Inflation	
Current month index level	193.84	Current month index level	193.84
Less index for previous month	<u>195.06</u>	Less index for same month of the previous year	<u>184.18</u>
Index point difference	-1.22	Index point difference	9.66
Divided by the previous month index	<u>195.06</u>	Divided by the previous year index	<u>184.18</u>
Equals	-0.006255	Equals	0.05245
Results multiplied by 100	-0.006255x100	Results multiplied by 100	0.05245x100
Equals percent change	-0.6%	Equals percent change	5.2%
